POSTGRADUATE COURSE – "Robotics in Gynecologic Surgery"

Faculty – Drs. Paul M. Magtibay, (Course Director), Sean Dowdy, Peter Lim, and Wesley Hilger

Course Description:

This course is designed to be a fast paced yet comprehensive review of the multitude of surgical procedures afforded today by current robotic technology. Faculty consists of expert surgeons, with large robotic practices, encompassing both academic medicine and private practice. We will review fundamental surgical procedures commonly performed by robotics with an emphasis on utilizing surgical video to demonstrate the surgical technique. Additionally, some of the controversial aspects of robotics will be covered including cost, set-up, and training.

Course Objectives:

1. To review commonly performed surgical procedures performed today with current robotic technology.
2. Demonstrate and provide helpful tips on how to perform some of the commonly performed surgical procedures in robotics.
3. Review cost, set-up and training in robotic surgery.
